

PROFESSIONAL SUMMARY

Role: Principal Software Engineer delivering enterprise identity and endpoint security platforms. Scope: iOS, iPadOS, and macOS app engineering with MCP orchestration, RAG systems, ESSO/PSSO strategy, and secure delivery workflows. Impact: 150+ RCAs, 99.99% reliability, and faster design-to-production cycles with measurable quality improvements.

Systems thinking applied: MCP ecosystems for design-engineering collaboration • Skills Builder and multi-agent orchestration • Figma→code component generation • AI-assisted refactoring & debugging paired with observability. Every system emphasizes repeatability, auditability, and predictable delivery at scale.

AI-ACCELERATED ENGINEERING WORKFLOWS

Framework for scalable, secure adoption of AI-assisted engineering workflows across product development and delivery.

- **ACKNOWLEDGE:** Evaluate LLM and MCP-based workflows against security, privacy, reliability, and operational constraints before broader adoption.
- **AMPLIFY:** Standardize prompts, guardrails, and agentic workflows with automated validation, testing, and feedback loops for continuous improvement.
- **AUTOMATE:** Implement RAG-assisted RCA triage, AI-driven refactoring and test generation, Skills Builder with multi-agent orchestration, and Figma-to-code automation pipelines.
- **MEASURE:** Track engineering velocity, defect reduction, MTTR, delivery cycle time, and workflow effectiveness through platform observability and telemetry.

EXPERIENCE

Palo Alto Networks

Hyderabad

Principal Software Engineer

February 2026 - Present

- Architected MCP orchestration for identity platform: integrated Figma export MCPs, code-gen MCPs, and Skills Builder / multi-agent test-gen MCPs to produce fully scaffolded auth modules; CI/CD-native, traceable generation; reduced auth feature lead time 30%.
- Engineered RAG+agentic RCA assistant: ingests crash analytics, structured logs, codebase context, and historical incident resolutions to rank-order fixes; connected to observability pipeline; reduced P1 incident MTTR by 45%.
- Built Figma↔Component↔Test ecosystem: automated design-token extraction, component generation, Storybook sync, and mutation-aware test scaffolding; enabled async product-design-eng workflows; eliminated design-code async lag.

- Consolidated auth platform: unified OAuth 2.0 / OIDC / SAML / ESSO / PSSO / FIDO2 / WebAuthn behind platform abstraction; standardized token handling, revocation, and MFA primitives; reduced auth-related bugs 35% across all platforms.

CyberArk Software India Pvt Ltd.

Hyderabad

Staff Software Engineer

June 2025 - January 2026

- Designed LLM-driven refactor+test pipeline: generated code-mods for deprecated APIs, auto-tested mutations against unit+integration suites, and pushed validated PRs; maintained full audit trail and rollback capability; reduced security review cycle 40%.
- Built prompt-governed agent for build triage: orchestrates test replay, failure analysis, and patch proposal generation with human-in-the-loop guardrails; connected to git/CI infrastructure; improved patch-to-production velocity 35%.
- Implemented Skills Builder and multi-agent MCP orchestration for cross-platform E2E: auto-generates and maintains test suites from UI diffs; detects flaky patterns and auto-quarantines; cut flaky test overhead by 50%; strengthened CI signal.

Senior Software Engineer

June 2021 - May 2025

- Built RAG system indexing 1000+ RCAs, design patterns, and security guidelines: supports semantic search for incident triage and code-review context; integrated into internal docs and LLM workflows; reduced onboarding ramp 40%.
- Deployed AI-assisted test generation: auto-generates mutation-aware unit tests from code diffs; enforces mutation-score thresholds in CI; raised baseline coverage from 62% to 81%; reduced regression defects 28%.
- Led platform consolidation strategy: evaluated KMM, React Native, Flutter against security/perf criteria via automated POC pipeline; paired each with codegen and test-gen for rapid iteration; informed org platform selection.
- Architected scalable auth backend: request-level caching, adaptive rate-limiting, and structured metrics collection; supported 100k+ concurrent users; integrated observability hooks for context-aware incident diagnosis and RAG-backed triage suggestions.

Frost Interactive (Currently ACE Online)

Bangalore

Senior iOS Developer

May 2020 - May 2021

- Built custom AVPlayer architecture for adaptive HLS streaming: implemented gesture-driven playback control, adaptive bitrate selection, chapter navigation, and PiP support; reduced buffering events 40%; served millions of students daily.
- Engineered FairPlay DRM end-to-end: integrated key server, license server, and encrypted stream delivery; designed offline download + playback flow; maintained full compliance with FPS licensing; enabled premium content monetization.
- Architected media cache layer: request-level caching with LRU eviction, intelligent prefetching, and bandwidth awareness; reduced network requests 60%; improved user experience on low-

bandwidth networks.

- Evaluated KMM for cross-platform strategy: prototyped shared network and caching layers across iOS/Android; measured code-sharing efficiency and performance trade-offs; informed platform roadmap decisions.

HAKATE Technologies (Product Name - EDWISELY)

Hyderabad

Senior iOS Application Developer

January 2019 - May 2020

- Shipped 8 iOS applications at scale: coordinated App Store submissions across large feature portfolios; maintained 98% approval rate; averaged 4.5+ star ratings; collectively served 1M+ users.
- Engineered hybrid LaTeX/KaTeX rendering pipeline: integrated server-side LaTeX parsing with native iOS rendering; eliminated full web-view overhead; delivered exam-ready mathematical content inline; improved engagement for 100k+ student users.
- Built adaptive ML-driven personalization system: engineered feature ingestion, model deployment, and A/B testing infrastructure; increased user retention 30% over 6 months via content recommendations.
- Evaluated Flutter for cross-platform consolidation: benchmarked widget performance on low-end Android; measured native integration capabilities; assessed time-to-migration against business ROI.

Proxim Quest IT Solutions

Hyderabad

iOS Application Developer

May 2018 - January 2019

- Led cross-functional product initiative as technical SME: coordinated eng/design/product requirements; established agile sprint cadence; shipped 15+ iOS applications collectively reaching 500k+ downloads.
- Established development best practices: standardized code review workflows, introduced unit testing, and automated build pipelines; improved team velocity 25%.
- Engineered payment platform integration: implemented Apple Pay, Stripe, and Razorpay APIs with secure tokenization and PCI compliance; enabled diverse monetization models.
- Architected high-availability backend: designed redundant systems for mission-critical apps; achieved 99.9% uptime SLA across portfolio.

BRN Infotech

Hyderabad

iOS Application Developer

September 2016 - May 2018

- **Developed Full iOS App Frameworks from Initial Design Concepts**
Transformed basic design plans into comprehensive iOS app frameworks, strategically delegating tasks to team members for efficient project progression.

- **Applied Agile Methodology to Enhance Product Quality and Development Efficiency**
Employed Agile development practices to improve product outcomes and optimize development workflows, ensuring timely and quality-driven deliverables.
- **Integrated Third-Party APIs to Accelerate Development and Enhance User Experience**
Incorporated third-party APIs to expedite development timelines and add interactive features, enhancing the functionality and engagement of mobile applications.
- **Maintained and Updated Existing Mobile Applications**
Designed and implemented patches for existing apps, enabling seamless iOS automatic updates and sustaining app stability.
- **Integrated Mobile Payment Solutions for Enhanced User Convenience**
Added support for mobile payment platforms, including Apple Pay, Stripe, and Razorpay, to offer users secure and flexible payment options within the app.
- **Adhered to Apple's Human Interface Guidelines**
Developed applications in line with Apple's Human Interface Guidelines to ensure consistent, user-friendly experiences that align with iOS UI standards.

Trainee

April 2016 - September 2016

- **Built a Strong Foundation in Programming and Mobile Application Development**
Gained in-depth knowledge in programming from the basics, covering design, development, and testing of mobile applications.
- **Developed Proficiency in Objective-C and Swift**
Achieved strong command of Objective-C and Swift, applying these languages across various app components.
- **Executed Full Development Cycle**
Managed all phases of the development process, from UI configuration to coding and testing, ensuring cohesive and functional application design.
- **Learned Software Engineering Best Practices**
Acquired knowledge of software engineering process improvements and industry best practices, incorporating these into development tasks.
- **Conducted Project Reviews for Quality and Compliance**
Reviewed projects to ensure adherence to specifications and quality standards, delivering applications that met established criteria.

PLATFORM EXPLORATIONS & SYSTEMS

- **MCP Orchestration Ecosystem:** Designed interconnected MCPs for design extraction, code generation, test generation, and observability injection; standardized workflows across product/design/eng; measurably reduced design-to-code iteration overhead.
- **Cross-Platform Consolidation Strategy:** Evaluated React Native, KMM, and Flutter via rapid POC pipeline; measured code-sharing ROI, performance overhead, and security posture; informed org platform decisions; reduced evaluation cycles 60%.
- **AI-Assisted Test & Refactor Pipeline:** Prototyped LLM-driven code-mod generation with auto-testing and audit trails; evaluated mutation-score impact and developer experience; deployed to production for auth module modernization.
- **RAG-Backed Knowledge Platform:** Built indexing pipeline for 1000+ RCAs and design patterns; integrated semantic search into incident triage and code review workflows; reduced troubleshooting time 35%.
- **Figma↔Code↔Test Automation:** End-to-end automation from Figma export to generated components, Storybook sync, and test scaffolds; enabled design-first async workflows; cut design-code handoff cycles from days to hours.
- **FairPlay DRM + Custom Streaming:** Integrated end-to-end DRM licensing, encrypted offline delivery, and custom AVPlayer media stack; enabled premium content monetization; served millions of streams daily with <100ms latency.
- **Advanced Rendering Pipelines:** Built hybrid LaTeX/KaTeX rendering and custom media players; eliminated full web-view overhead; delivered rich content inline with native performance.

SKILLS

AI-Accelerated Engineering Workflows

MCP orchestration • LLMOps & prompt engineering • Retrieval-Augmented Generation (RAG) • Agentic automation • AI-assisted refactoring & test generation • Figma→code acceleration • Skills Builder and multi-agent orchestration • Observability+RAG integration • Governance & auditability

Systems & Architecture

Microservices design • Distributed systems • Scalable APIs • Event-driven architecture • Caching strategies (request-level, distributed) • Database optimization • CI/CD pipeline design • Observability & structured metrics • Performance profiling

Identity & Authentication Technologies

OAuth 2.0 • OpenID Connect (OIDC) • SAML 2.0 • FIDO2 / U2F • WebAuthn/CTAP2 • Single Sign-On (SSO) • Enterprise SSO (Entra ID, Active Directory) • Platform SSO • Identity Federation • Mobile Device Management (MDM) • IAM/PAM • Zero-Trust Architecture

Hard Skills

MCP orchestration • LLMOps & prompt engineering • RAG systems • AI-assisted refactoring & debugging • Figma→code / design-to-code • Skills Builder and multi-agent orchestration • Test generation & maintenance • CI/CD automation • DevSecOps • iOS (Swift) • Android (Kotlin) • Backend (Python, Golang, .NET) • Mobile security (FIDO2, OIDC, SAML) • Observability & automated RCA

PROFESSIONAL PRACTICES

Engineering Execution

Agile & PI planning • Code review & architectural reviews • Test automation strategy & mutation testing • CI/CD design & observability • Technical debt prioritization & modernization • Cross-platform evaluation & POC frameworks

Incident Management & RCA

Severity classification & triage automation • Root cause analysis & incident synthesis • MTTR optimization & observability design • Structured incident runbooks & playbooks • Preventive measures & postmortem-driven improvements

Security & Compliance

Threat modeling & attack surface analysis • Secure code review & vulnerability triage • SAST/DAST integration & automated scanning • Compliance frameworks (SOC 2, GDPR, HIPAA) • Security-as-code & policy enforcement

Systems Architecture & Enablement

Platform design & API contracts • Scalability & performance optimization • Observability architecture & structured metrics • Cross-team workflows & developer experience • Engineering enablement & tool standardization
